Your Patients, Our Priority

World Class Lab Testing

Clinical Toxicology is the measurement and interpretation of concentrations of drugs and other toxic substance in human biological fluids for the purpose of patient care. This testing may be necessary when multiple drug ingestion is involved, as the effects of one drug may mask the clinical signs and symptoms of the effects of other drugs. The laboratory test results provide information to the clinician who can make a clinical diagnosis and provide therapy as needed.

"Your Patients, Our Priority"

STATE CERTIFIED LAB TESTING

About Us

Priority Laboratories utilizes the most sophisticated and precise equipment and technology available. The laboratory is divided into two departments, Infectious Disease and Toxicology, both programs utilizing the most advance methodologies currently on the market. Our programs provide the most accurate and timely results available giving providers and patients confidence in their results like never before. All of this while providing unsurpassed customer service. Our clients truly become part of the Priority Family!

With a large emphasis on veterans and minorities, our goal is to help our community become more knowledgeable and ultimately be in control of their health.

Community Driven

State of the Art Technology

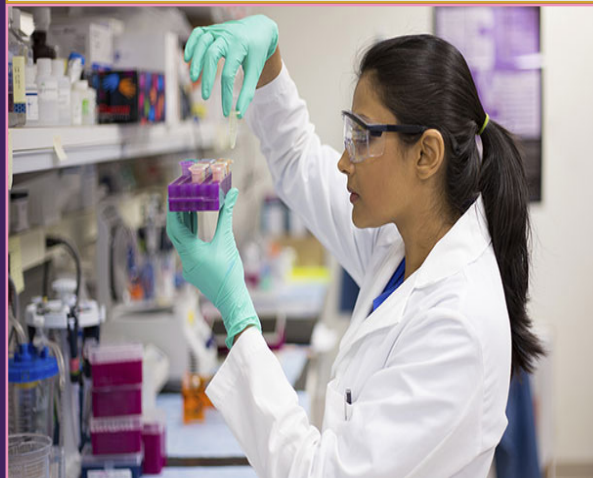

Fully Certified

Turn-Around Time

Certified and Compliant

Our labs maintain the highest standards in regard to regulations, standards and certifications. Our equipment and scientists are equipped to handle the most complex cases in record time while meeting all safety and compliance standards.
